VOCAPIA RESEARCH, LIMSI-CNRS

1 - Full processing chain for transcription of teleconferences
A short video presents the processing flow of close to real time transcription for a real use case (Fortune500 companies), including audio capture, automatic transcription, manual correction and publication of the final document.

2 - Live transcription of broadcast shows
Live real-time continuous transcription of TV news: the system takes as input the audio track from a TV channel and processes it to generate a transcription, which is then added to the video as close caption.
